# Automated implementation of Magento 2

You have a business to manage. Let elasticsearch take care of your hosting.

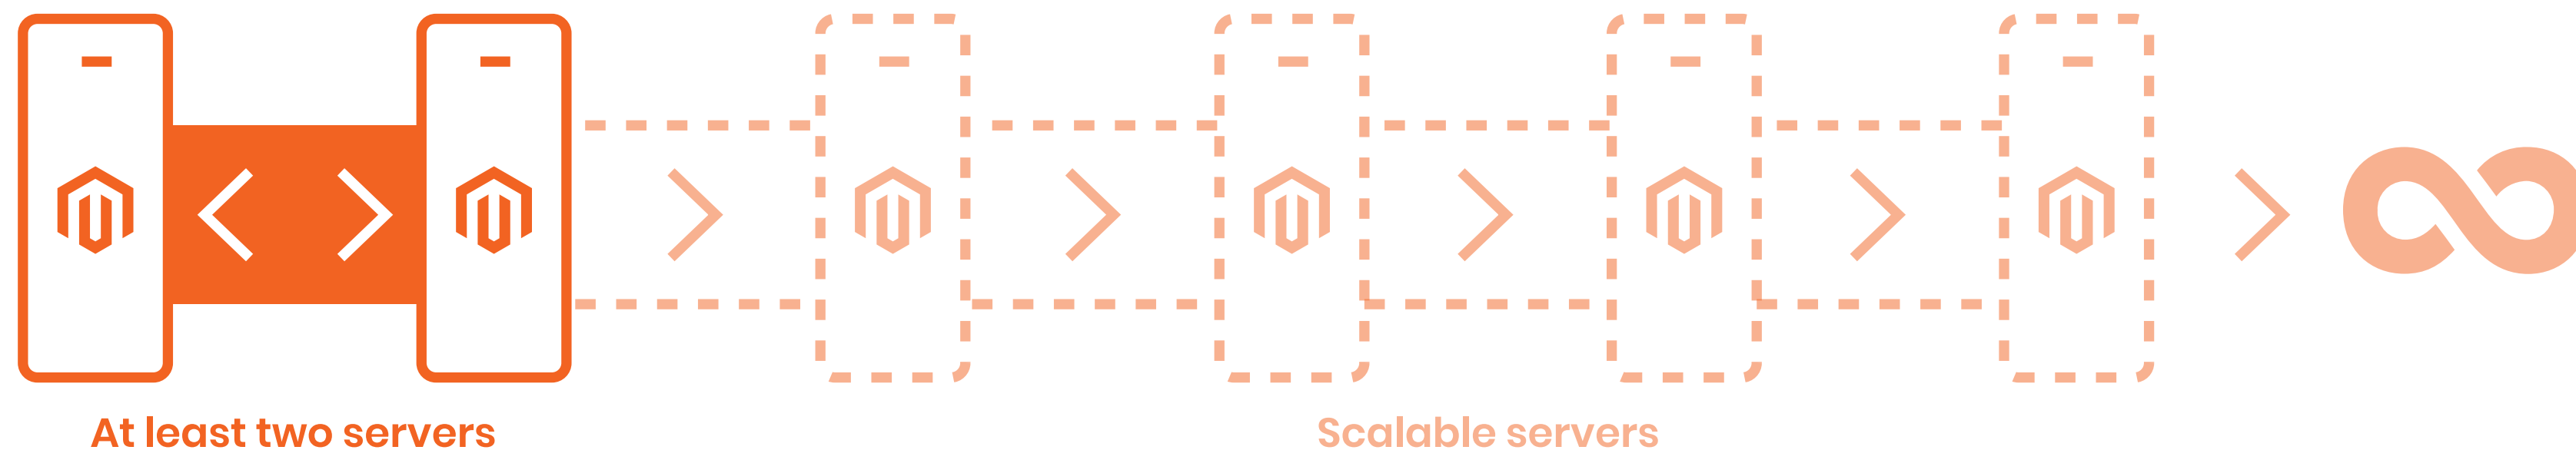

# Automatic auto-scaling in real time via Google cloud.

## The beauty of automatic auto-scaling in real time

No need to invest in a big server and pay for standby time to handle traffic fluctuations. The number of allocated compute resources (CPU & Memory) required by your application automatically scale up or down based on the exact needs at any given minute.

Auto-scaling will automatically adjust compute resources from one minute requiring e.g. only 2xCPU to another minute requiring 556xCPU or more. Pay only for the actual CPU and data transfer usage, measured in one minute resolution, monitored by Google Cloud.

# Full toolbox for development, building and debugging

- Customization via git, composer and build pipeline
- All Magento 2 cron tasks are managed by a separate node
- Heavy background activity will not affect the performance of the webshop
- Live access to database tools and streaming logs

# Google image service

- Images are stored, scaled, cached and served via Google Cloud
- This ensures low latency from a highly optimized cookieless infrastructure
- Reduces load on Magento 2 instances

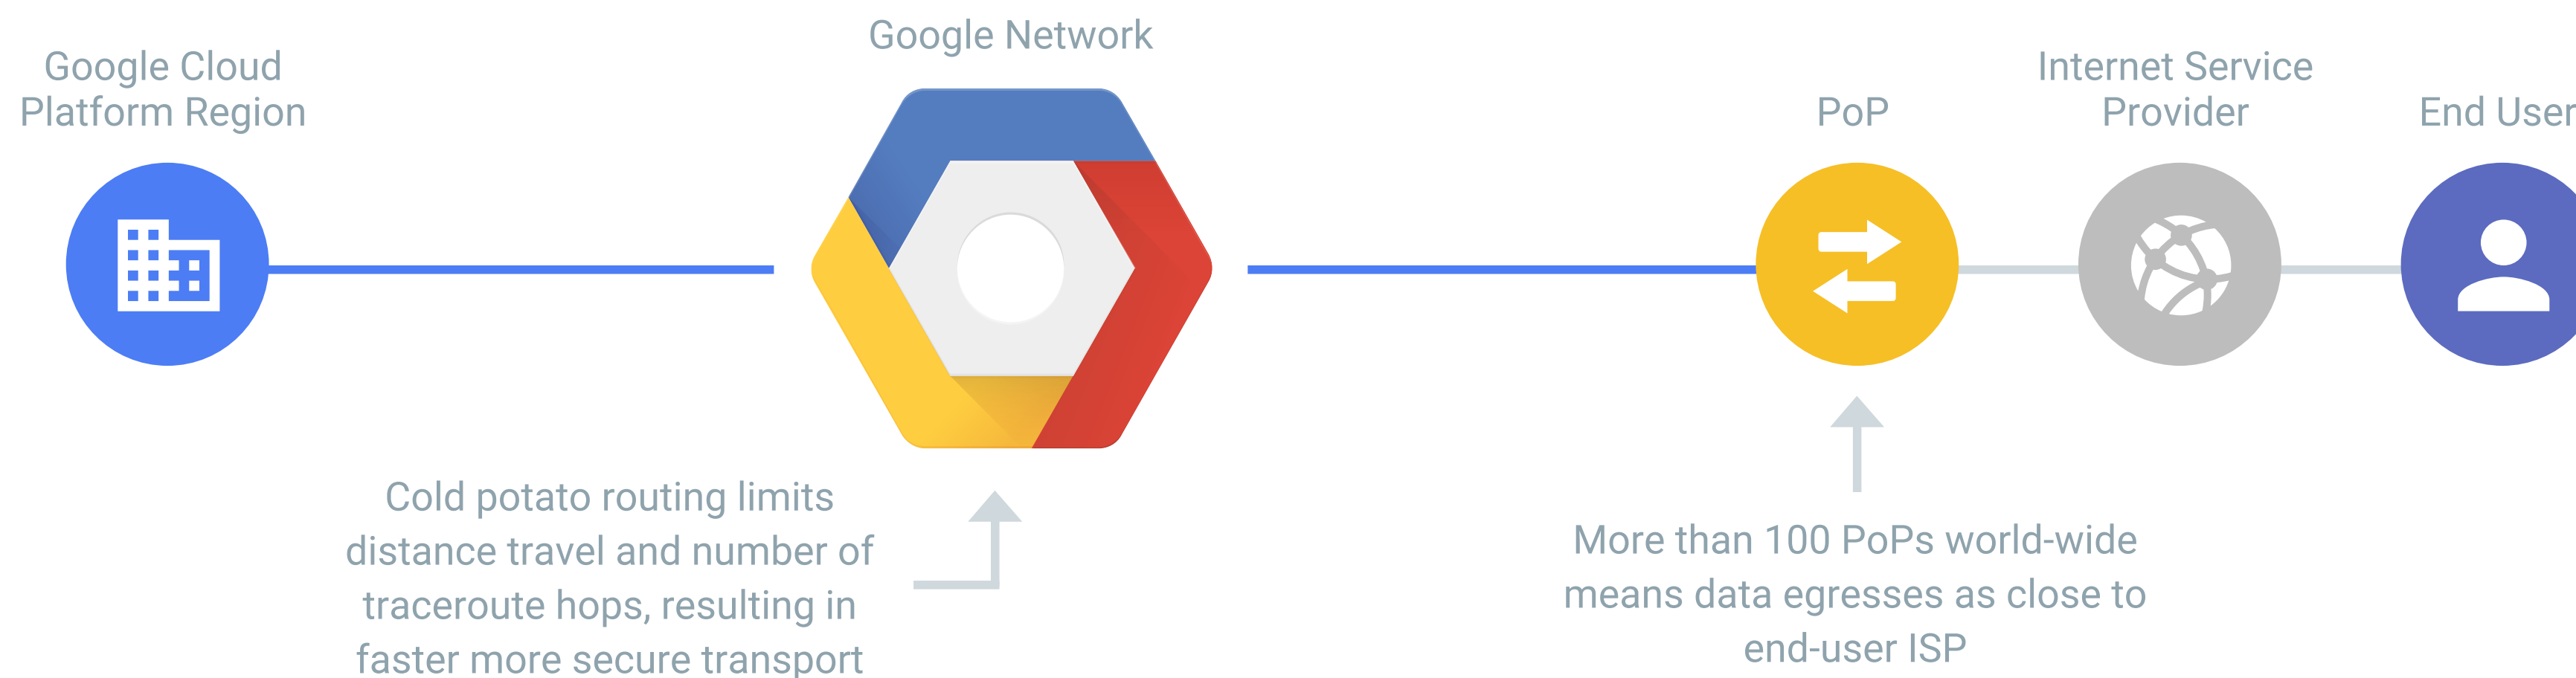

# Free SSL certificates

- All webshop instances support SSL
- Automatic installation and certificate renewal
- Domains added by the end user will automatically be issued an SSL certificate

# Google Premium Tier Network

- High performance routing
- Network services such as Cloud Load Balancing are global (single VIP for backends in multiple regions)
- High performance and reliability, Low latency, Global SLA
- Performance, reliability, global footprint and user experience are your main considerations

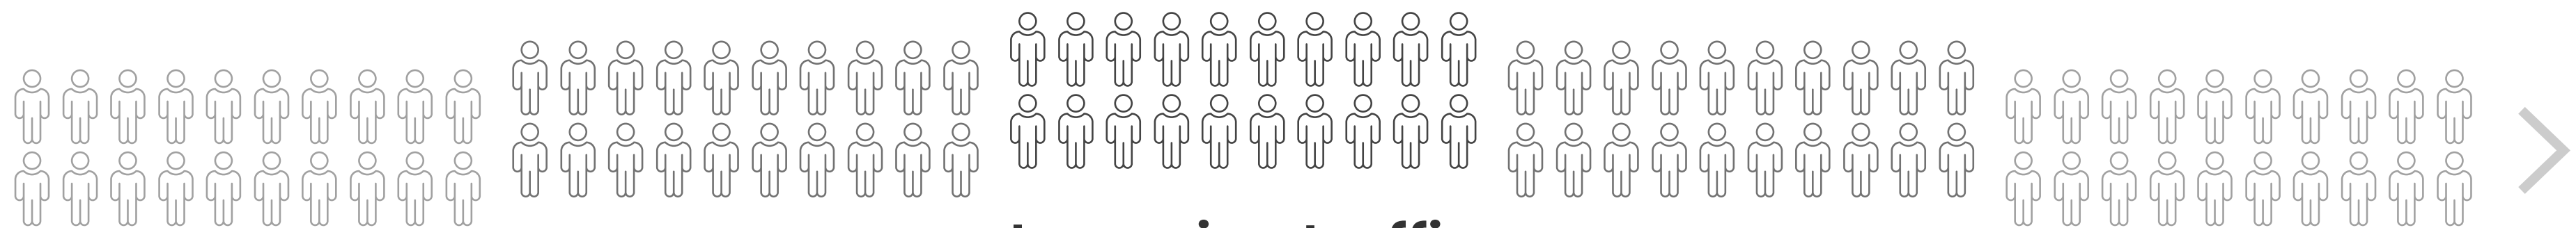

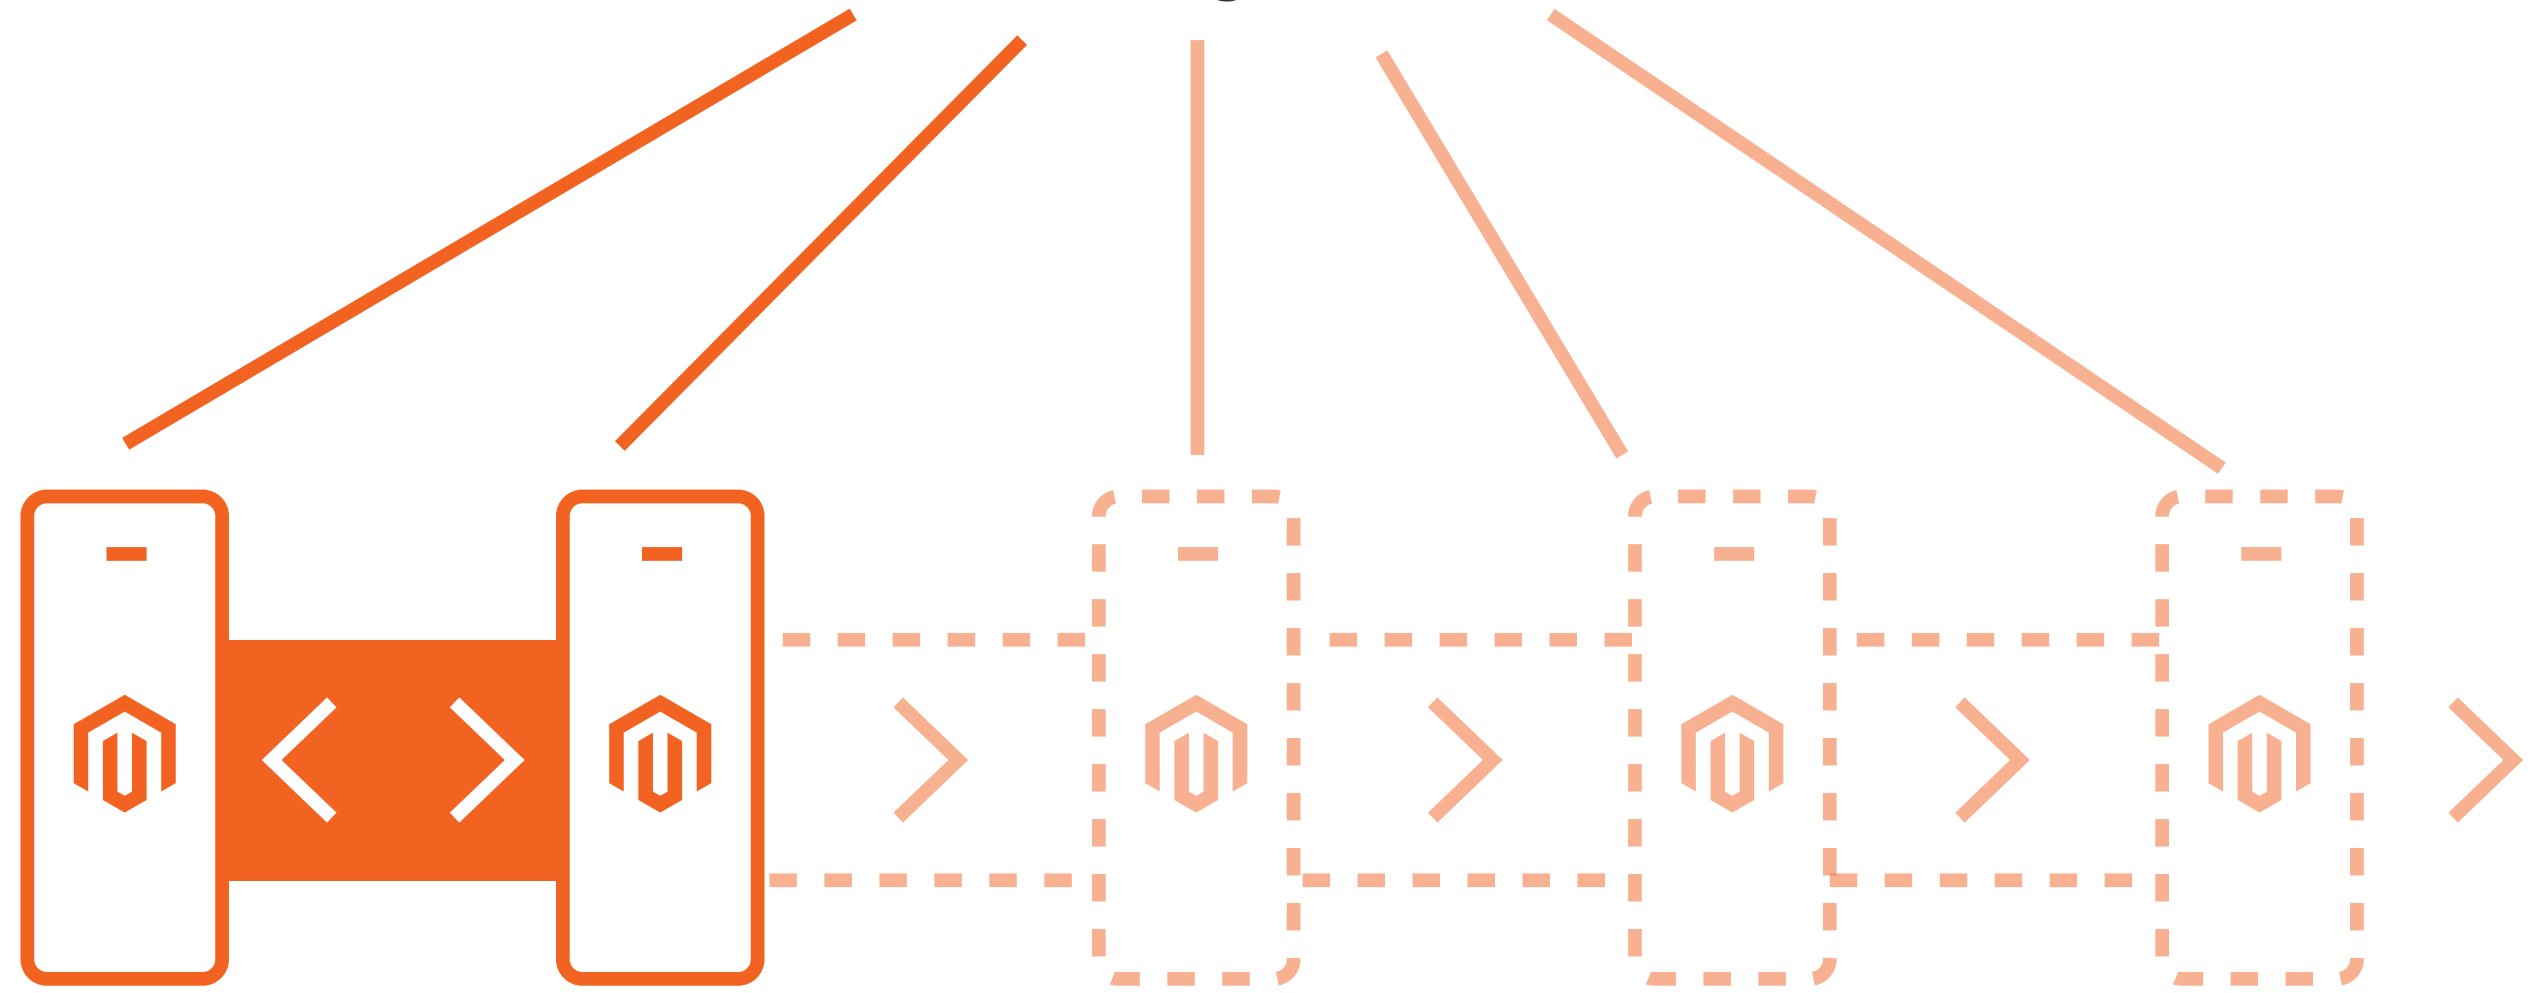

# elastic cloud

partner console

 One-click implementation

Incoming traffic

Minimum of two servers

Servers are automatically added / removed as needed

# Reach new customers of any size

- One click Magento 2 deployment in 60 seconds
- Save 50-100 hours for every new instance
- Able to offer prospect customers the chance to test Magento 2 in a demo account
- Magento 2 optimized elastic server environment
- Full toolbox for development, building and debugging
- Managed 24/7 hosting and support
- You only pay for what you use
- Focus on being creative
